

T03 Glenorchy Single Action Policy

1. Unless otherwise documented below, all rules for the staging of Single Action events on ranges of SSAA T03 Glenorchy (the Club) shall be governed by the (SASS) *Cowboy Action Shooters Handbook (the Handbook)* and *Match Director's Guide*.
2. Control of events by SSAA qualified Range Officers is permitted. The Club will encourage and consider subsidising, if necessary, any member of the Club enrolling in SASS Range Officer 01 or 02 courses.
3. The placement of targets shall be the same as those recommended in the *Match Procedures & Standards* section of the *Handbook* except that distances will be expressed in metres rather than yards.
Revolver targets: 7-10 metres, Shotgun Targets: 8-16 metres, Rifle targets: 13-50 metres.
4. As required in the *Handbook*, prior to use, all steel targets will be inspected for deformation and cratering and discarded if necessary.
5. All pistol and revolver steel targets purchased by the club in future will be of 10mm Bisalloy500, 3/8 AR500 or similar standard.
6. All targets will be positioned parallel to the firing line, be tilted forward approximately 20 degrees to create enough splatter trenching and no course of fire will require a shooter to sweep more than 30 degrees to engage all targets in a string of fire.
7. All steel revolver and rifle targets on Range-B and Range-C and close to the left-hand berm on Range-A will be sufficiently shrouded to prevent any splatter from passing over a side berm. The Range Officer will, at his sole discretion, decide if other targets need shrouding.
8. Range Officers will regularly check that steel targets are correctly set to create adequate splatter trenching.
9. The standards, and testing procedure requirements of the *Ammunition Covenants* section of the *Handbook* apply. The minimum standard for centrefire ammunition is not less than a power factor of 60, a minimum velocity of 400fps, a maximum revolver velocity of 1000fps and maximum rifle velocity of 1400fps.
10. The RO can request ammunition to be tested at any time, at their sole discretion, especially if it is suspected of not meeting standards.
11. Members of the Club will only use ammunition from the same batch, in the same or similar firearm, that has passed testing previously, with results recorded in the Club's Chronograph Register. It is recommended that 50% of non-members of the Club at any event have their ammunition tested.
12. All rifle, pistol and shotgun requirements, calibres and gauges that are described in Section 6 of the *Handbook* (except .56-50) and are permitted to be registered in Australia are permitted, with the exception that Mitchell Range Approval does not permit the use of projectiles exceeding 200 grains.
13. Shooters at all events will be made aware of the Mitchell Range Rules which are to be displayed at the entrance to the range in use with attention given to Category B 1 and 2 relating to restrictions on where firearms can be uncased and/or be holstered.
14. Adult shooters may use .22 calibre rifles and revolvers and sub 12-gauge shotguns that are permitted in the *Handbook* but are not eligible for club championship awards.
